No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucans.
-!- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages in cellulose and celloteraose, releasing cellobiose from the non-reducing ends of the chains.
-!- SIMILARITY: In the N-terminal section; belongs to cellulase family F (family 10 of glycosyl hydrolases).
-!- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO CELLULASE FAMILY A (FAMILY 5 OF GLYCOSYL HYDROLASES).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-JUL-1989 (Rel. 11, Created)

J. Gen. Microbiol. 139:307-316(1993).
-!- FUNCTION: THIS ENZYME CATALYZES THE ENDOHYDROLYSIS OF 1,4-BETA-GLUCOSIDIC LINKAGES IN CELLULOSE, LICHENIN AND CEREAL BETA-GLUCOSIDIC LINKAGES IN CELLULOSE, LICHENIN AND CEREAL BETA-D-GLUCANS. PRINCIPALLY ACTIVE AGAINST BARLEY BETA-GLUCAN.
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucans.
-!- PATHWAY: Cellulose degradation.
-!- SIMILARITY: Belongs to cellulase family E (family 9 of glycosylhydrolases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Clostridium thermocellum.
Bacteria; Firmicutes; Clostridia; Clostridiales; Clostridiaceae;
Clostridium.

FEMS Microbiol. Lett. 78:181-186(1992).

-! FUNCTION: ACTS AS A SCAFFOLDING PROTEIN IN THE CELLULOSOME. IT PROMOTES BINDING OF CELLULOSE TO THE CATALYTIC DOMAINS OF THE CELLULOSET OF THE CATALYTIC DOMAINS OF THE CELLULOSENT THROUGH THE BINDING OF THE NINE REPEATED DOMAINS WITH THE DUPLICATED SEGMENT OF 24 AMINO ACIDS PRESENT IN CATALYTIC SUBUNITS OF THE CELLULOSOME.

-!- SUBCELLULAR LOCATION: Cell surface.

-!- DOMAIN: THE COMPONENTS OF THE CELLULOSOME.

-!- DOMAIN: THE COMPONENTS OF THE CELLULOSOME.

-!- SIMILARITY: Contains at least 3 cohesin domains.

Endoglucanase VI precursor (EC 3.2.1.4) (Endo-1,4-beta-glucanase VI)
(Cellulase VI).
                                                                                                                                                                                                                                                                                                                                                                            optimum about 42 degrees Celsius.
SIMILARITY: Belongs to cellulase family A (family 5 of glycosyl
                                                                                                                                                                                                                                                       Mol. Gen. Genet. 241:341-350(1993).
-!- FUNCTION: Endoglucanase with some exoglucanase activity.
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucans.
-!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANBOUS: Has a pH optimum of about 7:0 and a temperature

Mol. Gen. Genet. 247:17-26 (1995).

-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic

-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic

linkages in cellulose, lichenin and cereal beta-D-glucans.

-!- SUBCELLULAR LOCATION: Secreted.

-!- SIMILARITY: Belongs to cellulase family A (family 5 of glycosyl
                  Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, A Sequence 7, A Sequence 7, A Sequence 7, A Sequence 22, Sequence 22,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 5,
